Geolandar M/T+ Tire Mixing  
Recommendations

08/25/04

In an effort to help you achieve maximum benefit from your tires, we are providing the following recommendations for tire mixing as it relates to the Geolandar M/T+.

### Tire Mixing

The Geolandar M/T+ product improvements require that the Geolandar M/T+ should not be mixed with the Geolandar M/T or any other traction tread pattern brands on the same axle.

When installing Geolandar M/T+ tires to a vehicle, all tires on a given axle should be changed to the new Geolandar M/T+ product. For maximum benefit the entire vehicle should be changed over to the Geolandar M/T+.

If the second axle will remain on original Geolandar M/T tires, the new Geolandar M/T+ should be applied to vehicle axles as stated in the vehicle owner's manual and all must be the same tire size and speed rating. If no guidelines are provided use the following recommendations.

1. Two Wheel Drive: Apply new Geolandar M/T+ to drive axle.
2. Four Wheel Drive or All Wheel Drive: Apply new Geolandar M/T+ to front axle.

To Be Sure You Have Geolandar M/T+ Tires Look For
